

Putoline Oil additive technology

The answer to the ever increasing demands on motorcycle oils because of continuously improved motor technology, high outputs and revolutions: **Putoline Ester Tech 4-stroke motorcycle oil**. Developed especially for modern high-performance motorcycles, Road and Off Road. The addition of advanced fully synthetic Ester Tech basic oils results in an unprecedented high performance level. The Ester Tech technology, developed and tested successfully in close cooperation with renowned racing teams, ensures a tremendously strong oil film, improved transmission and motor protection, exceptionally good "stay in grade" features and extremely low oil consumption.

Because of the constant temperature features and the improved additives package, wear and tear is prevented more efficiently, even during critical cold starts. Putoline Ester Tech 4-stroke oil is one of the most advanced in the world, your motorcycle will remain as new!

For a while it has been a trend to use car oils in motorcycles. Car oils are blended to perform in a significantly different environment to those encountered by modern motorcycle engines, and have been found to be the root cause of several engine related problems, including "clutch slip", "cam lobe pitting" and excessive "gear train wear".

As manufacturer's concern grow, Putoline Oil has responded quickly to solve this problem by developing a new generation of "pure bike" 4-stroke engine oils utilising their revolutionary Technomoto Additive System. The Putoline Technomoto 4-stroke oil is available in several exclusive formulas.

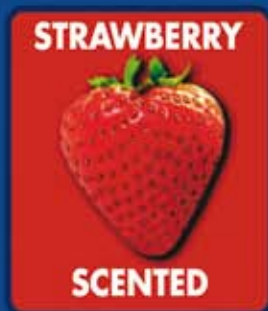

The Putoline Première logo defines the product as the very in its range. It signifies Putoline Oil's outstanding attention to detail in product development, production techniques and consumer focus. These are the highest quality products in the range.

The next step in 2-stroke oil technology.

Similar to the Putoline Technomoto Additive System, the MRH Additive System was specifically developed for scooters, motorcycles and karts. The main purpose of this new development is more power, cleaner-burn more efficient burning and exceptional engine protection.

Apart from these achievements, we also succeed in high rev and temperature stability, exceptional film and shear strength, reduction in fuel consumption due to friction minimization, no deposit build up on piston rings, power valve and exhaust system. Besides this the additive system also ensures excellent throttle response (even in wet conditions), long term optimised engine reliability and improved starting quality. MRH is race proven in lubricant technology.

This logo stands for excellent engine protection by utilising special synthetic additives distinguished by its totally unique strawberry fragrance. Heads will turn when you pass; all of a sudden there is a breath of fresh air.
